Improvement, rehabilitation or renewal work

Stereau Equipements et Services, a centre of expertise backed by the manufacturer Stereau, includes engineers and experts specialized in wastewater treatment plants, industrial water treatment and drinking water production.

As part of its missions, **Stereau Equipements et Services** offers local authorities improvement, rehabilitation or renewal work on their plants, based on Stereau's proven methodology and engineering tools. This work includes :

- Feasibility studies
- Execution studies (plans, documents, notices....)
- Rigorous project planning and management
- Cost, schedule and risk management
- Control of subcontractors and suppliers
- Qualified staff for monitoring, commissioning and performance assurance
- Respect for continuity of service during the execution of the work
- Operator training on new equipment
- Face-to-face or remote assistance

Examples of work carried out

- Reliability of raw and treated water pumping and implementation of water hammer protection systems of UV treatments Renewal of pumps and other rotating machinery
- Emptying and rehabilitation of digesters
- Replacement of bar screens

As the work is carried out on plants in production, the operator is systematically involved in all technical choices. Stereau Equipements et Services' priorities are operator satisfaction, operability, facility maintainability, optimum operating costs, operator training and support, and continuity of service.
